### Message from the Guest Editor

Dear Colleagues,

The total number of unique antibodies circulating in our blood, protecting us from infection is around  $10^8$ . There are 25 million to a billion unique T-cells. Microarrays have evolved over the last decade into a useful tool for looking at large numbers of biomolecules simultaneously, even in the millions. We will present a broad collection of immunological studies that could not have been possible without the technology of microarrays.

Prof. Dr. Phillip Stafford
