Deadline for manuscript  
submissions:

**31 August 2024**

### Message from the Guest Editors

MEMS technology opens up a new avenue for manufacturing low-cost and small-volume inertial measurement units. Micro inertial sensors are ubiquitous, and can be found in smartphones, cars, and smartwatches. Signals for the micro inertial sensors are sampled and processed for various applications, e.g., health monitoring, vibration sensing, position, and navigation. For position and navigation applications in particular, micro inertial sensors are utilized for measuring the position, velocity, and attitude information, i.e., the accelerometer is utilized to detect the pedestrian step and update the position; the micro inertial sensors are employed in a car to integrate with the GNSS to provide more reliable positional information; the UAV measures its attitude using the measurements from the micro inertial sensor. Minimizing the micro inertial sensor volume and improving the quality of its measurements have attracted much attention in the scientific community. New principles, advanced manufacturing technology, and novel signal processing algorithms are expected to improve its performance and extend its applications.

an Open Access Journal by MDPI

## Editor-in-Chief

### Prof. Dr. Ai-Qun Liu

1. Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China  
2. School of Electrical and Electronic Engineering, Nanyang Technological University, Singapore 639798, Singapore

## Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

**Journal Rank:** JCR - Q2 (*Physics, Applied*) / CiteScore - Q2 (*Mechanical Engineering*)
