Message from the Guest Editors

Dear Colleagues,

Microfluidic devices have attracted significant attention during the past two decades due to their features, which make them suitable for numerous applications ranging from diagnostics to remediation of wastewaters. However, a major challenge is ensuring that the developed applications are scalable to eventually reach commercial success in different niche markets. In this regard, one of the major obstacles is their manufacture because most applications require polished surfaces and well-defined micropatterns that are only attainable by costly, tedious, and highly sophisticated fabrication methods within cleanroom facilities. This significantly limits the possibility of reaching out to emerging markets where such facilities are yet to be fully accessible for small to mid-size companies interested in developing disruptive businesses that rely on microfluidic platforms. This Special Issue is therefore dedicated to recent developments in affordable manufacturing routes that focus on closing the gap between lab-scale development and industrial implementation.

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank: JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Mechanical Engineering)
