Message from the Guest Editors

Dear Colleagues,

Internet-of-Things (IoT) devices have become widespread in the last several years largely thanks to advances in battery life, communications technology, signal-processing algorithms, electronic fabrication, and manufacturing. In particular, innovative circuit designs in wireless/wireline transceivers, data conversion, clock generation, analog- and digital-signal processing, application-specific processors, and power management have dramatically improved the capabilities of IoT devices and lowered the adoption cost critical for massive IoT deployment. Challenges such as limited battery power, low supply voltage, noise, circuit variability, and cost continue to present bottlenecks for the next generation of IoT devices. Unique solutions through innovations in circuit topologies and architectures, hardware-accelerated signal processing, power-aware design, calibration, and bio-inspired designs are being actively investigated. This issue covers the latest developments in circuit designs for IoT applications with a specific focus on low-power techniques.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Ai-Qun Liu

1. Department of Electrical and Electronic Engineering, The Hong Kong Polytechnic University, Hong Kong, China
2. School of Electrical and Electronic Engineering, Nanyang Technological University, Singapore 639798, Singapore

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

Journal Rank: JCR - Q2 (*Physics, Applied*) / CiteScore - Q2 (*Mechanical Engineering*)
