Deadline for manuscript submissions:
closed (15 March 2018)

Message from the Guest Editor

Packaging is essential for the practical use of MEMS, in terms of performance and reliability. The electronics market has been continuously requiring the downsizing and cost reduction of MEMS, and, thus, wafer-level packaging is becoming more important and replacing conventional die-level packaging. One of important features of the wafer-level packaging of MEMS is that it often needs the device cavity, which is hermetically sealed. Therefore, hermetic/vacuum sealing and electrical feedthrough from the sealed cavity are key technologies. On the other hand, emerging devices need new types of packaging, for example, biocompatible and flexible packaging, which are also attracting a great deal of attention. Test, reliability control, wiring, dicing, chip-level integration and material development related to the wafer-level packaging of MEMS are also included in the scope of this Special Issue. Wafer-level packaging is strongly connected to the integration of multiple components, and, thus, papers about wafer-level integration are also welcome.

Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.
Journal Rank: JCR - Q2 (*Physics, Applied*) / CiteScore - Q2 (*Mechanical Engineering*)
