submissions:

15 January 2025

Message from the Guest Editors

Dear Colleagues,

Plant pathogenic fungi are a significant group of microorganisms causing crop yield loss as well as reduction of agricultural products quality.

An actual control strategy against fungal diseases in plant protection requires deep knowledge of the species within fungi infected the plants. Molecular biology tools allow accurate identification of the fungal species and help to significantly expand the understanding of the diversity of fungi, many species of which have not yet been found and studied. The phylogenetic analysis of fungal populations reveals the intraspecific diversity and provides a new insight into the speciation of fungal taxa and microevolution.

This Special Issue on «Molecular Identification and Phylogeny of Crops Pathogenic Fungi» welcomes original articles on studies of fungal populations and species of well-known plant pathogens, and emerging fungi associated with a wide range of crops: cereals, legumes, oilseeds, vegetables, and fruits.

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (Microbiology) / CiteScore - Q2 (Microbiology)
