Deadline for manuscript  
submissions:

**closed (29 February 2024)**

### Message from the Guest Editor

Aerobic methane synthesis bacteria are microorganisms that have the ability to produce methane in the presence of oxygen. Studies of bacteria from a wide spectrum of genera and species have revealed that multiple enzymes have the ability to produce methane in aerobic conditions. Particularly, this process is typically associated with specific groups of bacteria called methanotrophs. Methanotrophic bacteria have garnered significant research interest due to their potential applications in fields such as biogas production, wastewater treatment, and environmental sustainability.

## Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
