

Toxic Microorganisms on Ecosystems: Current Concerns and Expansion

Guest Editor:

Dr. Cristiana Moreira

Interdisciplinary Centre of Marine and Environmental Research, University of Porto, Matosinhos, Portugal

Deadline for manuscript submissions:

closed (15 June 2024)

Message from the Guest Editor

Toxic microorganisms on human disease agents occur in ecosystems possessing natural sources of prokaryotes biodiversity. Epidemiological and toxicological spurs aim to provide a mechanism for tackling ecosystem infections and intoxications. The use of a risk assessment to uncover hazards and risks, along with providing control measures for mitigating the impact of toxic microorganisms on ecosystems, may underpin a new strategy for understanding their occurrence. Namely, investigations into on freshwater and on coastal ecosystems, currently a source of exposure given increasing human demands, reporting toxic microorganisms may shed a light on the role on environments in their occurrence. All sciences, as well as a polyphasic approach, may help to mitigate toxic microorganisms' occurrences, in particular those of pathogenic bacteria, toxic cyanobacteria or viruses. Studies on toxic microorganisms on ecosystems and on global changes may help to understand disequilibria of ecosystems and mitigate human-related environmental diseases.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
