

## Plant-Pathogenic Fungi

Guest Editors:

### Dr. Sabrina Sarrocco

Department of Agriculture, Food and Environment, University of Pisa, Pisa, Italy

### Dr. Isabel Vicente

Department of Microbiology and Genetics, Spanish-Portuguese Institute for Agricultural Research (CIALE), University of Salamanca, Salamanca, Spain

Deadline for manuscript submissions:

**closed (30 September 2023)**

### Message from the Guest Editors

Fungi are one of the most ecologically successful groups of organisms due to their ability to colonize any environment. Some phytopathogenic fungi feed on a broad range of host plants, exploiting generalist traits often combined with strong competition strategies. Other fungi develop specialized mechanisms of plant infection and colonization that involve host-specific virulence factors. Environmental challenges shape fungal genomes, and their plasticity results in the evolution of novel traits for niche adaptation and plant disease establishment. Comparative genomics and genetic engineering expand the limits of basic research towards in-field approaches based on the development of more efficient tools for pathogen detection and disease management.

In this Special Issue of *Microorganisms*, the topics will include, but are not limited to:

- Fungal effectors;
- Secondary metabolites involved in plant colonization and fungal pathogenesis;
- Genomics and evolution of plant-pathogenic fungi;
- Novel patho-systems;
- Innovative tools for the early detection and management of fungal diseases on plants.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
