Message from the Guest Editors

Dear Colleagues,

Emerging infectious diseases are defined as infections based upon whether they have recently appeared within a population or those for which its incidence or geographic range is rapidly increasing or threatens to increase in the near future. They can be caused by a variety of pathogens, and existing examples include SARS virus, SARS-CoV-2, MERS virus, filoviruses, hemorrhagic fever viruses, dengue virus, chikungunya virus, West Nile virus, Zika virus, monkeypox virus, *Borrelia burgdorferi*, and *Candida auris*. Emerging infectious diseases can have a serious public health impact if not detected and contained while they are localized and manageable, as was the case with the COVID-19 pandemic.

We are pleased to invite you to submit articles related to the epidemiology, diagnosis, treatment, and control of emerging and re-emerging infectious diseases, with particular a particular on recent advances in the aforementioned fields. Original research articles and reviews are welcome.

We look forward to receiving your contributions.

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
