

Oxidative Stress, as a Potent Antibacterial Mechanism of Action

Guest Editor:

Prof. Dr. Raphaël E. Duval

Dean, Faculty of Pharmacy,
Université de Lorraine, CNRS,
L2CM, 54000 Nancy, France

Deadline for manuscript
submissions:

closed (15 September 2022)

Message from the Guest Editor

The aim of this Special Issue is to highlight recent advances in research on the oxidative stress-mediated mechanisms of action of antibiotics, antibacterials (in general), natural products, nanoparticles, etc. This Special Issue welcomes original research papers, reviews, expert opinions, etc. Particular interest will be given to studies describing the mechanism of action of molecules of interest or studies developing an analytical method capable of detecting or measuring the oxidative stress induced by antibacterials.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
