Deadline for manuscript
submissions:

closed (30 April 2024)

Message from the Guest Editor

Intestinal microbiota may contribute to animal health and disease. However, to gain a mechanistic understanding of how the gut microbiota affects animal health and disease, the current research is moving away from descriptive microbiota census analyses toward cause-and-effect studies. Joint analyses of high-throughput animal multi-omics data, together with measures of host physiology and mechanistic experiments in animals and cells, hold potential as initial steps in the identification of potential molecular mechanisms behind previously reported associations. Through this topic, we will discuss the current knowledge on how gut microbiota and derived microbial compounds may link to the metabolism of the healthy animal host or to the pathogenesis of common animal diseases.

The aim of this Special Issue of *Microorganisms* is to present a collection of articles that provide a current snapshot of the research on the effects of gut microbiota on animal health and disease. Manuscripts covering all aspects of research relating to gut microbiota and animal health and disease are welcome, including livestock, poultry, aquaculture, special economic animals, wild animals, etc.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
