Deadline for manuscript  
submissions:  
**closed (15 August 2023)**

### Message from the Guest Editors

Leishmaniasis is an important neglected tropical disease, responsible for significant mortality and morbidity. Recent COVID restrictions have impacted on the control of this disease and interrupted control programmes. This has led to an increase in clinic visits for some types of leishmaniasis. This highlights the importance of identifying novel ways of controlling the diseases either through the identification of new drugs, better treatment regimens or immunological interventions, e.g., vaccines or immunotherapy. The aim of this Special Issue is to provide a collection of articles that showcase the current issues in the research of “Leishmaniasis: Interventions used to control infection”. As the Guest Editor, I invite you to submit research articles, review articles, and short communications dealing with *leishmaniasis and the effect that novel drugs, drug formulations, immunotherapies, vaccines, and phototherapy can have on controlling infection. We are also interested in research studies on how COVID has impacted on leishmaniasis.*

## Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
