Deadline for manuscript  
submissions:

**closed (31 December 2023)**

### Message from the Guest Editor

Prenatal infections may occur at any time during pregnancy and their complications include intrauterine fetal death, preterm birth, morbidity, mortality, and long-term sequelae in newborns. The most common organisms are viruses, bacteria, fungi, and protozoa. They can reach the fetus and the placenta through several pathways, including through the ascending route (along the endocervical canal), from maternal blood or via invasive procedures (amniocentesis).

This Special Issue of *Microorganisms* aims to present a collection of articles that examine the pathological findings of the various microorganisms in the fetus and in the placenta. Manuscripts covering all aspects of histopathology of infections in pregnancy, including their outcome and management, are welcome.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
