submissions:

**closed (1 November 2022)**

### Message from the Guest Editor

Dear Colleagues,

*Pseudomonas* and *Xanthomonas* genera include a wide diversity of lifestyles such as vegetable tissue-colonizing pathogens, epiphytic opportunist pathogens, plant growth-promoting rhizobacteria or non-pathogenic strains that are classified as pathogenic species. The Special Issue "Evolutionary Trajectories in Plant-Associated *Pseudomonas* and *Xanthomonas* Strains" focuses on microbial and evolutionary ecology of plant associated *Pseudomonas* and *Xanthomonas*, as well as the genomic and molecular diversity of lineages and the virulence and fitness features involved in the host–plant interaction.

Dr. Eva Arrebola

## Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
