of Medicine, Emory University,  
Atlanta, GA, USA

Deadline for manuscript  
submissions:

**30 November 2024**

### Message from the Guest Editor

The emergence of COVID-19 is a reminder that new transmissible viruses may have global social, health, and economic impacts.

Recently developed biological tools (including rapid and efficient cloning and sequencing) have advanced scientific efforts to identify the viral enzymes of important novel and re-emerging human viruses (e.g., Dengue, West Nile, Zika, Chikungunya, influenza, and now coronaviruses).

At the same time, drug discovery has expanded exponentially, resulting in vast libraries of compounds that can be employed to screen direct antiviral activity.

This Special Issue will highlight recent advances in antiviral drug developments, and address the following domains:

1. directly acting antivirals;
2. modifiers of immune activation;
3. inhibitors of specific cell activation pathways.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
