

Skin Microbiome, a Long Story of Clinical Trials 2.0

Guest Editor:

Dr. Lionel Breton

Former Scientific Director L'Oreal Research, Cilia Consulting CEO, IDEC Therapeutic (Telostim.com) CSO, Paris, France

Deadline for manuscript submissions:

closed (31 July 2022)

Message from the Guest Editor

The scientific community continues to demonstrate the functional role of the human gut and skin microbiome as an inspirational source for future therapeutics. Despite the huge potential offered by these discoveries in providing health in the long run, future therapeutics are still limited by the challenges in obtaining relevant clinical outcomes. In recent years, skin has evolved as one of the most extensively described tissue regarding microbiome diversities linked to host physiology, age, environmental exposure, and diseases. Moreover, the role of the skin microbiome has been validated by clinical results with respect to atopic dermatitis, psoriasis, acne, and seborrheic dermatitis.

This Special Issue gathers recent research and new results of the clinical evaluation of skin microbiome-based treatments. It will serve as guidance for scientists from the biopharmaceutical and academic community to investigate the causal role of the skin microbiota in disease and to create a new generation of microbiome-targeted therapeutics with predictable modes of action and consistent clinical outcomes.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
