University of Granada, Granada,  
Spain

### Message from the Guest Editor

This Special Issue is important for environmental protection and agriculture potentiation based on microbial engineering. Novel approaches for applying microbes to the bioremediation of environments, prevention of pollution, and enhancement of agricultural activity deserve an important spotlight, which we aim to provide. This Special Issue gathers contributions on the following topics:

Deadline for manuscript  
submissions:

**30 November 2024**

- Novel techniques for the bioremediation of environmental pollution in the environment;
- The effects of pollutants on environmental microbial communities and the adaptation process of microbes to environmental stresses of pollution;
- The use of microbial communities to increase agricultural yield and quality;
- The use of microorganisms for the protection of plants in agricultural fields against biotic and abiotic stresses;
- Regional applications of environmental engineering strategies based on microbial communities.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
