Deadline for manuscript  
submissions:

**closed (30 November 2021)**

### Message from the Guest Editors

Dear Colleagues,

Host-microbe interactions play crucial roles in marine ecosystems, but we know little of the mechanisms that govern them, their evolution, and their ecological and economic impacts. This Special Issue is dedicated to studies in host-microbe interactions of macro- and microalgae, from mutualistic to parasitic interactions. Contributions can include diversity assessments of the symbiome, functional studies on interactions, conceptual advances, and commercial aspects such as the cultivation of algae and alga-derived products. Model systems include viruses, bacteria, archaea, fungi, oomycetes, and endo- and epiphytic algae.

## Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
