Message from the Guest Editor

Dear Colleagues,

The bacteria that constitute the genus *Bacillus* are among the most ubiquitous in nature and diverse physiologically. The majority of *Bacillus* species studied, to date, are beneficial to various commercial and industrial endeavors, medicine and pharmaceuticals and to agriculture. Indeed, some are quite helpful nutritionally, serving as food supplements and probiotics. Others such as *B. cereus* and *B. anthracis* are potential human and animal pathogens. The objective of this Special Issue of *Microorganisms* is to present some of the latest molecular experimental approaches for studying various *Bacillus* species and call attention to the benefits and utility of this group of bacteria. Original research articles, as well as review articles, are invited.

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
