Message from the Guest Editor

Dear Colleagues,

The genus *Candida* includes several species able to colonize and proliferate in different habitats. Although *Candida albicans* continues to be the most common agent of human infection, other species have emerged as important pathogens, such as *Candida glabrata* or *Candida parapsilosis*, and, lately, *Candida auris*. The plasticity of the biological traits of *Candida* spp. relies on their association to microbiotas in a commensal way of life. However, when they shift into aggressive agents of infection, especially in the susceptible human host, and when resistant to the available therapeutics. The virulence with which *Candida* species cause damage to the host is strongly linked to the characteristics of each *Candida* species, their ability to survive, and the armamentarium to escape or subvert the immune system. Irrespective of their virulence, the engagement of the immune response by these pathobionts can be a major contributor for immune-inflammatory diseases.

This Special Issue aims to detail the characteristics of *Candida* spp., their interaction with the immune system, and the consequences of this interaction to human health.

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
