

Molecular Biology of Hepatitis B Virus—from Basic Concepts to Therapeutic Targets

Guest Editors:

Dr. Amir Shlomai

Department of Medicine D and the Liver Institute, Rabin Medical Center Beilinson hospital and the Sackler Faculty of Medicine, Tel-Aviv University, Tel-Aviv, Israel

Dr. Eleftherios Michailidis

Laboratory of Virology and Infectious Disease, The Rockefeller University, New York, NY, USA

Message from the Guest Editors

The aim of this Special Issue is to gather the most updated information regarding the molecular biology of HBV and to connect the dots tying this information to present and future targets for curative anti-HBV therapies. We would like to invite researchers to submit their research or review articles on HBV concerning different aspects of its life cycle, with emphasis on exploiting basic concepts in HBV molecular virology for better therapeutic tools.

Deadline for manuscript submissions:

closed (31 July 2021)

an Open Access Journal by MDPI

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))
