Deadline for manuscript submissions:

closed (31 May 2020)

Message from the Guest Editor

Dear Colleagues,

Plant pathogenic oomycetes cause billions of dollars of losses each year and some threaten natural ecosystems in their invasive range. At the same time, control measures are often insufficient, their diversity is still largely unknown, and new pathogens are constantly emerging. The scope of the Special Issue on Plant Pathogenic Oomycetes is to collect significant advances in all areas of research on plant pathogenic oomycetes. Both original research and review articles are welcome, but please contact the Guest Editor first, if you plan to submit a review manuscript. Manuscripts dealing with single-gene phylogenies or descriptions of single species will only be acceptable in rare cases. Please contact the guest editor if in doubt.

Prof. Dr. Marco Thines

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
