Message from the Guest Editors

Dear Colleagues,

To illustrate the biological diversity behind the parasitism strategies of protists, this Special Issue of *Microorganisms* invites researchers to present their original research findings, up-to-date reviews or short communications concerning any aspect related to the subject, including, but not limited to, evolutionary trends in successful parasitism, invasion and survival strategies, host-parasite interactions (immune, cellular, metabolic, etc.), virulence mechanisms, and pathogenesis. The main goal is to provide a platform to exchange a current knowledge and to demonstrate that parasitism strategies of these organisms are so specific and unique that they need to be addressed individually in search for modern prophylactic strategies, diagnostic and therapeutic tools.

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
