Message from the Guest Editors

Numerous parasites and pathogens, including those causing the deadliest human diseases, are transmitted by bloodsucking vectors. Human and livestock-infecting vector-borne microorganisms have received a great deal of attention in research; however, others remain neglected due to their low prevalence and/or pathogenicity, yet they could provide us with a breadth of information that would be of general interest. New vectors of known diseases continue to emerge, and known vectors expand their host and geographical ranges, resulting in the emergence of new foci and outbreaks.

The aim of this Special Issue is to collect a range of information about vectors, both notorious and neglected, and the parasites that they transmit. Novel vector–parasite combinations, pathogens' influence on vectors, interactions among parasites sharing the same vectors, mechanisms of transmission, and other aspects of this symbiosis will deepen our understanding of parasites and their vectors.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
