Deadline for manuscript
submissions:

29 November 2024

Message from the Guest Editor

Electrical prospecting includes the DC method, self-potential method, induced polarization method, electromagnetic method, etc. It is a kind of geophysical method that uses artificial or natural signals to detect electrical parameters from the surface to the bottom of the lithosphere. This type of method collects electric or electromagnetic signals on the surface, in wells, or in water and obtains electric parameter models such as the polarizability and resistivity of underground media through data processing and inversion. Finally, according to the distribution characteristics of these parameters, the continental dynamics, plate boundaries, faults, volcanoes, and earthquake zones, as well as shallow research such as oil and gas, mineral deposits and geothermal field, are studied.

This Special Issue calls for papers on the research of electrical prospecting, mainly including but not limited to the relationship between the electrical structure and deep mineralization, volcanoes, metal ore exploration, geothermal resource exploration, etc.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Geochemistry and Geophysics*) / CiteScore - Q2 (*Geology*)
