

Green Mining Solutions for the Sustainability of Mine Tailings Management

Guest Editors:

Prof. Dr. Carlos Cacciuttolo

Department of Civil Works and Geology, Catholic University of Temuco, Temuco 4780000, Chile

Prof. Dr. Edison Atencio

School of Civil Engineering, Pontificia Universidad Católica de Valparaíso, Av. Brasil 2147, Valparaíso 2340000, Chile

Deadline for manuscript submissions:

28 February 2025

Message from the Guest Editors

Dear Colleagues,

The generation of mine tailings worldwide increases every year due to the rising demand for certain metals that are necessary for the decarbonization of the economy, which will be achieved by developing the digital age of information, implementing electromobility, and inserting renewable energies in order to face the global crisis of climate change. It is in this scenario that mine tailings management with the best available technologies (BATs) becomes a crucial issue in carrying out responsible practices and thus achieving sustainability within the mining business.

This Special Issue arises from the consideration of the insertion of a new paradigm on mine tailings management and the emergence of green mining solutions to satisfy responsible mining needs for a sustainable society. We invite researchers, professors, scientists, consultants, mining practitioners, and technology suppliers to submit their latest research work and share their experiences with other colleagues. We welcome research articles and reviews of research studies that focus on this important and complex issue from a multidisciplinary perspective.

We welcome your contributions.

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Mineralogy*) / CiteScore - Q2 (*Geology*)
