Engineering, Faculty of  
Engineering and the Built  
Environment, Cape Peninsula  
University of Technology, Cape  
Town 7530, South Africa

Deadline for manuscript  
submissions:

**closed (31 March 2024)**

### Message from the Guest Editors

Environmental remediation is the technique used to remove contaminants or pollutants from soil, groundwater, and other areas of the environment. This is carried out to repair the environment and prevent additional harm. Chemical and biological methods can be used to remove contaminants. This Special Issue will concentrate on the biological process known as bioremediation. Utilising microorganisms and plants, bioremediation employs techniques like bioprocessing, biodegradation, bioaccumulation, and bioremoval of toxins or pollutants. It is thought to be the most affordable and efficient method. Microbial bioremediation, mycoremediation, and phytoremediation are the three main types of bioremediation.

## Message from the Editor-in-Chief

*Minerals* welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Geochemistry and Geophysics*) / CiteScore - Q2 (*Geology*)
