submissions:

closed (15 April 2021)

Message from the Guest Editors

Dear Colleagues,

Natural clays and clay minerals are used in various industrial and environmental applications due to their unique physico-chemical properties such as high cation exchange capacity and specific surface area and/or optimal morphological structure. This Special Issue will focus on utilization of clays and clay minerals as additives in construction and building materials such as cements, mortars and geopolymers to improve their characteristics, namely mechanical resistances, adhesion, adsorption properties towards industrial wastes etc. Clays and clay minerals should be preferably used in a natural state, although chemical or thermal treatments may be involved. Manuscripts related to the construction and building materials based just on metakaolin will be excluded. If using metakaolin as an additive or binder, other clay or clay mineral should be used in the system.

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Geochemistry and Geophysics*) / CiteScore - Q2 (*Geology*)
