Deadline for manuscript  
submissions:

**closed (31 December 2022)**

### Message from the Guest Editors

Dear Colleagues,

Slag granulation with heat recovery is an essential and emerging technology for sustainable metal production. This technology has been developing for a few decades with much technical and commercial success. Despite such good progress, there are still some challenges in optimizing the performance of the process and maximizing waste heat recovery in the form of high-grade heat.

In response to these challenges, significant R&D has taken place worldwide, where process fundamentals and engineering have been investigated through experiments, modeling, and simulation, as well as piloting. In this Special Issue of the journal of *Minerals*, we aim to highlight recent progress and breakthroughs through invited papers from international experts. The invited papers will cover the fundamentals of atomization/granulation of molten slags, heat transfer and granule formation, phase transformations in liquid and solid states, reactor engineering for efficient heat recovery, utilization and characteristics of granulation products, process design and implementation in pilot and industrial scales, etc.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Minerals* welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), GEOBASE, GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (Mining and Mineral Processing) / CiteScore - Q1 (Geology)
