

Geology of Uranium Deposits

Guest Editors:

Dr. Andy Wilde

Dr. Oliver Kreuzer

Dr. Alex Otto

Deadline for manuscript
submissions:

closed (21 May 2021)

Message from the Guest Editors

The study of uranium deposits is crucial for the discovery of much-needed new resources and the profitable exploitation of these new deposits. The precipitous drop in uranium price during the 1980s led to a worldwide reduction of research into uranium deposits. Today, most supply–demand scenarios require a major investment in new mines to satisfy the requirements ... intends to bring together the latest research into uranium deposits, particularly into deposit types that have seen very little new work since the eighties. We welcome all descriptive deposit models, detailed studies on ore-forming processes, mineralogical studies and discovery case studies that might help in future discovery and metallurgical applications.

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Mineralogy*) / CiteScore - Q2 (*Geology*)
