Message from the Guest Editors

Dear Colleagues,

Sedimentary rocks cover about three-quarters of the continents on the Earth's crust and hold the singular advantage that they contain a vertically stacked and relatively undeformed record of erosion, sedimentation, and tectonic environments. Therefore, the characterization of sedimentary rocks and minerals as well as their chemistry and isotopes constitutes a key approach to studies of tectonic processes and tectonic environmental reconstructions.

In this Special Issue, we would like to focus on recent advances in the applications toward global and regional tectonic reconstructions that are based on the use of compositions, chemistry, and isotopes of sedimentary rocks and minerals. In addition, this issue would like to collect new ideas regarding methodologies and provide reviews of recent developments. Moreover, case studies of tectonics in specific regions using sedimentary data are also of interest. We suggest that potential contributors address the following themes, and the submission of original research and review articles is preferred over other article types.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Geochemistry and Geophysics*) / CiteScore - Q2 (*Geology*)
