Deadline for manuscript
submissions:

closed (31 October 2023)

Message from the Guest Editor

Dear Colleagues,

This Special Issue is divided into the following four parts:
Section 1: Physical and chemical properties of ores. Among them, ore properties mainly include crystal structure properties, surface physical and chemical properties, microstructure properties, and distribution of different minerals.

Section 2: Development of efficient and green flotation reagents. This part mainly studies the binding relationship between the surface of minerals and flotation reagents, including hydrophobicity, selectivity, synergism, ionic action, etc.

Section 3: Flotation process of minerals. The main purpose of this part is to solve practical production problems, including the stage grinding and stage separation process, combined addition sequence of reagents, whole-flow closed-circuit flotation experiment, etc.

Section 4: Equipment development of flotation. This part mainly reports the research and development of mineral processing equipment, involving hydrodynamics, reaction kinetics, multiphase synergy, etc., and equipment including crushing equipment, magnetic separation equipment, mixing equipment, various types of flotation machines and flotation columns.

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Mineralogy*) / CiteScore - Q2 (*Geology*)
