Deadline for manuscript submissions:  
**closed (18 February 2022)**

### Message from the Guest Editors

Dear Colleagues,

The Mesohellenic Ophiolites include the Vourinos Complex, one of the founding localities of plate tectonic theory, as well as the Pindos, Othris, and Koziakas ophiolites. While all contributed significantly to the ophiolitic analogue in older studies, we invite new research and research syntheses that can aid in interpreting these ophiolites within a more “cutting-edge” research framework. What is their significance to the geotectonic setting of the Hellenides? Research topics on mineralization, ore geology, geochemistry, tectonics, and the Mesohellenic and Hellenide regional setting are welcome. This volume invites relevant studies on these and related ophiolites within the Hellenides.

## Message from the Editor-in-Chief

*Minerals* welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Mineralogy*) / CiteScore - Q2 (*Geology*)
