# Advanced Techniques and Efficiency Assessment of Mechanical Processing

Guest Editors:

#### Prof. Dr. Daniel Saramak

Department of Environmental Engineering, Faculty of Civil Engineering and Resource Management, AGH University of Science and Technology, Mickiewicza 30 Av., 30-059 Cracow, Poland

#### Prof. Dr. Marek Pawełczyk

Silesian University of Technology, Department of Measurements and Control Systems, Akademicka 16, 44-100 Gliwice, Poland

#### Dr. Tomasz Niedoba

Department of Environmental Engineering and Mineral Processing, AGH University of Science and Technology, 30-059 Krakow, Poland

Deadline for manuscript submissions:

closed (17 September 2021)

# **Message from the Guest Editors**

Dear Colleagues,

We all know that mechanical processing is an important part of ore processing and the production value chain and plays a significant role in mineral aggregate production. The proper selection of technological circuits for individual raw material also results in achieving more favorable effects in downstream beneficiation processes, and it can save energy and decrease the environmental footprint of the processing industry in terms of lower levels of dust, noise, heat, and vibrations. This Special Issue of *Minerals* is considered to cover up-to-date solutions within mechanical processing of raw materials. Therefore, the Editors especially welcome papers contributing:

- New technologies and devices application into comminution and classification circuits;
- Original approaches aiming at improvement of crushing products quality and recovery;
- Reduction of useful mineral lost during mechanical processing;
- Innovative methods of broken aggregate production;
- Decrease of the negative impact of mechanical processing operations on the environment and society, especially in terms of dust and noise emissions:
- Modeling and assessment of comminution/screening results.

IMPACT FACTOR 2.2

# **Message from the Editor-in-Chief**

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

### **Author Benefits**

**Open Access:** free for readers, with <u>article processing charges</u> (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef,

CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (Mineralogy) / CiteScore - Q2 (Geology)
