Deadline for manuscript submissions:

closed (15 November 2022)

Message from the Guest Editors

Dear colleagues,

In recent decades, an increasing number of non-ferrous and precious metal deposits have been discovered over all the world. Concurrently, new and advanced analytical techniques in deposit research, such as isotope dating of U-Pb, Ar-Ar, and Re-Os, which has been applied to ore minerals, in-situ trace element and isotope compositions analysis, etc., are being utilized in this area. New theoretic viewpoints on ore genesis, mineralization mechanism, and metallogenetic regularities have been proposed and proven.

This Special Issue will mainly focus on, but is not limited to, properties and ore genesis, ore-controlling tectonic-magmatic events, geochronology and tectonic setting, regional metallogeny, and metallogenetic models of newly discovered, important, and well-known non-ferrous and precious metal deposits. It is also interesting on new research techniques which have been well applied in deposit research.

Besides theoretical work, this Special Issue will also pay close attention to new discoveries and ore-exploration achievements regarding non-ferrous and precious metal deposits.

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Mineralogy*) / CiteScore - Q2 (*Geology*)
