# New Developments in Mineral Processing by Physical Separation and Flotation Methods

Guest Editor:

#### Message from the Guest Editor

Dr. María Ángeles Martín-Lara

Department of Chemical Engineering, University of Granada, 18071 Granada, Spain

Deadline for manuscript submissions: closed (31 August 2020)

Dear Colleagues,

The purpose of this Special Issue is to provide papers featuring the latest developments in the fields of mineral processing by physical separation and flotation methods. Flotation is widely used to separate valuable minerals from rock and fine coal particles from clay, silt, shale, and other ash-producing matter. This Special Issue provides wideranging coverage of research and practical (operating) topics including process control, simulation and instrumentation, and environmental issues.

#### Message from the Editor-in-Chief

*Minerals* welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases. **Journal Rank:** JCR - Q2 (*Mineralogy*) / CiteScore - Q2 (Geology)
