Deadline for manuscript  
submissions:

**closed (15 December 2018)**

### Message from the Guest Editor

Dear Colleagues,

Uranium is one of the most important energy-related materials, with a current use almost entirely for generating electricity. In recent International Atomic Energy Agency (IAEA) classification, 15 types of uranium deposits were defined. In order of their economic ranking, the most significant uranium deposits are unconformity-related, sandstone, quartz-pebble conglomerates, granite-related and breccia complexes.

The goal of this Special Issue is to provide a platform for geoscientists dealing with geology and mineralogy of uranium deposits, in order to discuss new insights on their geological settings, composition and evolution of host rocks series, mineral composition of main uranium minerals (uraninite, coffinite, brannerite) and classification of uranium deposits. There are expected innovative approaches applied to construction of new models of uranium ore deposits, discussion of physics-chemical conditions of their origin (e.g., fluid inclusion study, isotopes, detailed geochemistry in relation to behavior of HFS elements, especially REE, Y, Zr).

Dr. Miloš René

## Message from the Editor-in-Chief

*Minerals* welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Mineralogy*) / CiteScore - Q2 (*Geology*)
