Deadline for manuscript submissions:

closed (31 May 2023)

Message from the Guest Editors

The migration of (radioactive) contaminant ions in an aqueous environment is strongly affected by their molecular reactions at the solid–water interface, including physical adsorption, ion exchange, chemisorption, surface precipitation, sorption of colloidal phases, electron transfer (oxidation state changes), coordination changes (number and/or type of ligands around the sorbed species), as well as the modification of the surface structure of the substrate (dissolution/secondary phase formation). These molecular reactions are triggered by a variety of environmental conditions, such as concentrations, pH, ionic strength, and temperature.

In this Special Issue, we seek innovative contributions that provide new kinetic and molecular insights into interfacial reactions in the geosphere. We invite research papers involving the application of various spectroscopic, microscopic, and microcalorimetric techniques combined with theoretical approaches (e.g., quantum chemistry), surface complexation, and reactive transport modelling, with the aim to provide a more profound understanding of the structures, thermodynamics, and kinetics of interface phenomena.

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Geochemistry and Geophysics*) / CiteScore - Q2 (*Geology*)
