

Quantitative Analysis of Food Residues by Advanced Functional Materials

Guest Editors:

Dr. Yukun Yang

School of Life Science, Shanxi University, Taiyuan, China

Dr. Xingyu Lin

College of Biosystems Engineering and Food Science, Zhejiang University, Hangzhou, China

Dr. Longhua Xu

School of Food Science and Engineering, Shandong Agricultural University, Taian, China

Deadline for manuscript submissions:

closed (31 July 2024)

Message from the Guest Editors

Food safety is a major strategic issue related to people's livelihood. Food residues are an important cause of food safety problems. Therefore, the quantitative analysis of food residues is particularly important as a means to ensure food safety. The sensitive and accurate quantitative analysis of food residues is challenging due to the complexity of food sample matrices and the rapid requirements of food safety testing.

Advanced functional materials are a class of materials with special magnetic, optical, and electrical properties that can be used in conjunction with food analysis techniques to achieve the sensitive and reliable quantitative analysis of food residues. For example, advanced functional materials can be combined with chromatographic, spectroscopic and electrochemical techniques to make the quantitative analysis of food residues easier, faster, more accurate and more sensitive.

This Special Issue aims to collect the latest advances in the development and application of advanced functional materials in the quantitative analysis of food residues.

an Open Access Journal by MDPI

Münster, Germany

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (Chemistry, Multidisciplinary) / CiteScore - Q1 (Chemistry (miscellaneous))
