Message from the Guest Editors

Dear Colleagues,

Vegetables have a particularly high content of biologically active compounds, including phenolic acids, flavonoids, stilbenes, anthocyanins, tannins and carotenoids, with strong antioxidant activity, functional properties, antiproliferative activity, and hypocholesterolemic action.

For this Special Issue of *Molecules* “Bioactive Compounds from Vegetable Sources”, we invite researchers to contribute original research or review articles related to the extraction and characterization of biologically active compounds, including the evaluation of the biological properties of selected vegetable extracts, the possibility of incorporating them in targeted delivery systems, micro and nano capsule characterization, and their use for food and pharmaceutical applications.

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (Chemistry, Multidisciplinary) / CiteScore - Q1 (Chemistry (miscellaneous))
