Message from the Guest Editor

Dear Colleagues,

Polyphenols are the most common phytochemicals in the human diet and comprise a variety of compounds with a great diversity of structures, from simple molecules to polymers with high molecular weights. A growing body of research indicates that polyphenol consumption may play a vital role in health through the regulation of metabolism, weight, chronic disease, and cell proliferation. Over 8,000 polyphenols have been identified thus far. Animal, human, and epidemiologic studies show that various polyphenols have antioxidant and anti-inflammatory properties that could have preventive and/or therapeutic effects for cardiovascular diseases and neurodegenerative disorders. The long-term consumption of diets rich in polyphenols has been shown to protect against certain cancers and type 2 diabetes. Food processing and storage strongly influence the polyphenol content of foods. Certain compounds are prone to oxidation, and the addition of polyphenols to foods may compromise their shelf stability. Due to the many health benefits that polyphenols have been shown to have, many strategies have emerged to market them as functional foods.

an Open Access Journal by MDPI

Editor-in-Chief

Münster, Germany

Message from the Editor-in-Chief

As the premier open access journal dedicated to molecular chemistry, now in its 30th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts, and novel materials. Pushing the boundaries of the discipline, we invite papers on all major fields of molecular chemistry and multidisciplinary topics bridging chemistry with biology, physics, and materials science, as well as timely reviews and topical issues on cutting-edge fields in all of these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
