Message from the Guest Editors

Dear Colleagues,

The chiral phenomenon is closely connected with living organisms and almost all biological compounds; proteins, amino acids, sugars, and enzymes all possess chirality. In many chiral compounds, one of the enantiomers is effective, while the other is often invalid or even toxic. Hence, the development of novel chiral separation and recognition materials is very important. This Special Issue aims to bring together advanced research achievements regarding new approaches to the development of novel chiral separation materials, chiral and biomarkers sensors as well as metabonomics techniques.

Dr. Qifeng Fu

Biology and Phytochemistry,
University of Münster,
Corrensstrasse 48, D-48149
Münster, Germany

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (Chemistry, Multidisciplinary) / CiteScore - Q1 (Chemistry (miscellaneous))
