closed (1 June 2019)

Message from the Guest Editor

Dear Colleagues,

Prodrug technologies are widely used to improve systemic drug delivery, but can also be used to target drugs to specific sites. This Special Issue focuses on prodrugs of the latter type, which are designed to increase drug exposure of disease targets relative to normal tissues. This search for selectivity is a focus in cancer therapeutics in particular, but also in other diseases. Topics of relevance to this update and overview of prodrug technologies include design of compounds responsive to disease-specific triggering mechanisms (such as tumour hypoxia) and the biological evaluation of such prodrugs.

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (Chemistry, Multidisciplinary) / CiteScore - Q1 (Chemistry (miscellaneous))
