Deadline for manuscript
submissions:

closed (30 June 2024)

Message from the Guest Editors

Zeolites are crystalline microporous materials with well-defined channels and tunable cavities that enable shape-, size- and polarity-based molecular selectivity in various applications. Metal organic frameworks, also known as zeolite-like materials, share similar porous features with zeolites but possess larger pore sizes and more diverse frameworks constituted of inorganic building units and organic linkers. Recently, nanosized zeolite materials have drawn much attention due to increased external surface area, shorter diffusion pathlength, colloidal stability and unique electronic and optical properties. These nanoparticles have been applied in many applications, such as thin films, sensors, catalysts, adsorbents, optics, drug delivery carriers, etc. In this Special Issue, we welcome submissions on all aspects of zeolite and zeolite-like nanoparticles. In particular, we embrace manuscripts deepening our insights into the development of environmentally benign synthesis and modification methods, characterizations and development of advanced structured or multifunctional nanozeolite materials and interdisciplinary applications of nanozeolites.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (Chemistry, Multidisciplinary) / CiteScore - Q1 (Chemistry (miscellaneous))
