### Message from the Guest Editor

Dear Colleagues,

We would like to cordially invite you to contribute an original research paper or a review article to a Special Issue of *Molecules*. The topic is broadly defined as “The Chemistry of Indoles”. Indole derivatives are arguably the most extensively exploited heterocyclic compounds in medicinal and pharmaceutical research. Their rich chemistry continues to surprise and fascinate scientists around the world. We envision the main purpose of this Special Issue in highlighting a multifaceted modern indole chemistry, including novel synthetic methodologies allowing for efficient assembly of indole-based heterocycles, unusual reactivity patterns, and other noteworthy applications. We especially welcome contributions on the preparation of natural and biologically active indole derivatives.

## Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.
