Message from the Guest Editor

Dear Colleagues,

Extracellular nucleosides and nucleotides that are derived from the purine (adenosine, ADP, and ATP) or the pyrimidine moiety (UDP and UTP) play crucial roles in the membrane-bound purinergic receptor's signaling. Purinergic receptors are the most important drug targets for complex diseases like inflammation, cancer, cardiovascular, and neurodegenerative diseases. This Special Issue explores the drug discovery and development for purinergic receptors in honor of Professor Dr. Christa E. Müller on the occasion of her 60th birthday.

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
