submissions:

closed (1 October 2021)

Message from the Guest Editors

In the last two decades, carbon has transcended beyond its traditional allotropes, graphite and diamond, into a variety of novel forms, distinguished by the unique combinations of their atomic bonding (SP² or SP³), nanosized structural features (such as pore size, surface features), dimensional confinements (0–3 D), and degree of crystallinities (amorphous to crystalline). These new forms exhibit interesting mechanical, chemical, electronic, and optical properties and have proven their potential in a wide range of applications.

The Special Issue focuses on the electrochemical properties of these novel carbon materials (such as carbon nanotubes, graphenes, fullerenes, carbon onions, carbon dots, mesoporous carbons, and diamond nanocrystals, as well as their derivatives) and explores their applications in chemical sensing, biosensing, and energy storage; the three areas where their unique electrochemical properties have found a direct relevance. Along with original and unpublished research work, comprehensive reviews covering relevant areas are also welcome.

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (Chemistry, Multidisciplinary) / CiteScore - Q1 (Chemistry (miscellaneous))
