### Message from the Guest Editors

Dear Colleagues,

In the last years, organic synthesis has been greatly influenced by the widespread diffusion of continuous flow technologies, which have revolutionized not only the synthesis and manufacturing of chemical products but also the design and development of novel reactions.

The present Special Issue “Flow Chemistry in Organic Synthesis” aims to collect and disseminate some of the most significant and recent contributions in the very wide and highly interdisciplinary area of continuous flow organic reactions.

## Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.
