Message from the Guest Editor

Dear Colleagues,

Metal oxide nanoparticles can exhibit unique physicochemical properties. A large variety of metal oxide nanoparticles can be encountered, including nanograins, nanowires, nanotubes, and nanoporous particles. At present, research on novel metal oxide nanoparticles is active and multidisciplinary, as it involves chemistry for the development of the nanoparticles, physics for the study and optimization of their properties, and even biology in the case of biomedical applications (e.g., nanovectorization, multimodal imaging, and antibacterial properties).

This Special Issue will focus on all aspects of the application of metal oxide nanoparticles in emerging fields, such as biosensors, energy storage and conversion, photocatalysis, optoelectronics, and biomedicine.

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
